

As most of the SFAG are layed on old decomposed granite courts in order to save cost, how would you prepare the base before laying the SFAG ?

What is the cost of base preparation?

Have you done the above before? Where?

Is your product porous or impervious? Which do you prefer and why?

What are the specifications of your club standard SFAG, ie pile height and density etc?

What is the brand and source of the yarn used in the SFAG?

Does the yarn have UV protection properties? What are they?

Is the yarn fibulated? Please explain fibulation and the benefits.

Where does your sand come from ? Is it non abrasive and subangular ?

Are the base lines woven into the carpet or glued? What are the benefits of each?

What are the details of your warranty?

Do you leave surplus sand for the club to spread after the court is laid? How much?

ACT public courts are generally 18m by 36m championship courts. What is your price for this size at club standard?
